

# Namirial OTP - Android

Creation and activation of Namirial OTP

# Intro

Namirial otp is an application for mobile dedicated to the generation of the One time passwords (disposable codes)

This type of password is used when it is required an higher level of authentication. ( strong authentication).

The virtual OTP is necessary when:

- Using a remote signature
- Logging into SPID level 2 or higher with Namirial ID
- Accessing the private area of Namirial TS

In this guide will be shown how to activate namirial Otp in Android systems.

**Attention:** this guide is based on app version: **4.2.0.5 or higher**

# How to download it

Namiral otp application is free to download for Android ( ver. 5 or higher) through [Google Play Store](#).

# How to create an OTP

Once the app is started, this will be shown in your screen.

To create a new OTp follow these steps:

- Click on the bottom right green “+”
- Click on Add OTP

# Add an OTP

In order to create an otp it is required to select and insert the **document type**:

1. **International** (*ID Doc, Passport, Driver License number*)
2. **Italian document** (tax code)
3. **your mobile phone number**

NOTE: (you need to use the same data used in the registration process)

In the field “ **name of otp**” you might choose a name of your choice, this label will help you identify the Otp in the case you have more than one token active simultaneously.

**After inserting all your data please click on “ request sms code”**

ENABLE OTP

# App Security

For security issues, the app is asking you to create a 6 digits pin to protect your otps.

After completing the procedure the app will ask you if you want to add a biometrical system unlock such as fingerprint recognition and/or facial recognition.

**Attention:** If you lose your pin you will need to **reinstall** the app and create a new pincode. The pin code is required every time the user wants to open the app

Fig. 1

Fig. 2

# Completing

Completed the procedure, in the app homepage you will see your new otp.

The following informations will be shown:

- **Name otp:** "test otp"
- **Otp:** 6 digits number
- **Id:** unique code to identify the otp
- **Timer:** time remaining for the otp ( 30 sec max)

More information and useful tips

# Settings and useful information

In order to open settings please click on the top right three dots icon.

**Settings:** allows you to change pin and turn on the biometrical recognition features

**About:** shows which version of the app is now run.

**Support:** opens up to our channel of support

# Q&A
